

REMARKS

The foregoing amendment to the claims is being offered in a format acceptable to the U.S. Patent and Trademark Office. No new matter is presented by this Amendment. Entry of this amendment by the Examiner is respectfully requested.

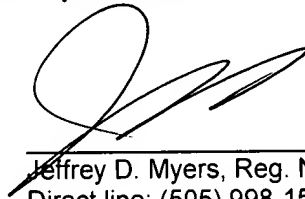

Attached hereto is a marked-up version of the changes made to the claims by the current amendment. The attached paper is captioned "Version with Markings to Show Changes Made."

Authorization is given to charge payment of any fees required, or credit any overpayment, to Deposit Acct. 13-4213. A duplicate of this paper is enclosed for accounting purposes.

Respectfully submitted,

Dated: May 24, 2002

Version with Markings to Show Changes Made

In the Claims:

1. (Amended) An apparatus for the internal inspection of measuring head [(2)] and a cable [(3)] coupled to the measuring head, which cable can be coupled outside the pipe or tube [(1)] to be measured to a device processing the measuring data, [characterized in that] wherein at its distal end and behind the measuring head [(2)], the apparatus is provided with a reel [(4)] for winding the cable [(3)] on and off.
2. (Amended) An apparatus according to claim 1, [characterized in that] wherein the cable is a [glass-fibre] glass-fiber cable [(3)] and in that the apparatus near its distal end is provided with a feed device [(6)] for feeding the measuring head [(2)].
3. (Amended) An apparatus according to claim 1 [or 2, characterized in that] wherein the measuring head [(2)], the reel [(4)], the feed device [(6)], and any possible electronics [(5)] present near distal end are each incorporated individually in carrier members that can be moved through the pipe or tube [(1)].
4. (Amended) An apparatus according to claim 3, [characterized in that] wherein the individual carrier members are sequentially interconnected by means of flexible couplings [(7)].
5. (Amended) An apparatus according to claim 4, [characterized in that] wherein the flexible couplings [(7)] are formed by hydraulic tubes with a steel covering.
6. (Amended) An apparatus according to claim 5, [characterized in that] wherein the length of the hydraulic tubes is chosen in accordance with the flexural stiffness of the tubes.
